Colorado company provides water treatment solutions for the restaurant industry

Enviro-Water Solutions, LLC of Denver has announced the company is now the distributor in Colorado for Aero-life aeration systems. Aero-life is an environmentally friendly wastewater treatment solution for foodservice operations. With this process, by adding oxygen to the grease trap environment, the Aero-life aeration system can reduce pumping frequency by 50 to 75 percent according to Enviro-Water Solutions owner Mark Denchfield. The system raises levels of fresh oxygen in the trap which causes two things to happen. First, the pH level in the trap is raised drastically thus reducing the odor associated with the trap. In addition, the continuous source of oxygen in the trap greatly enhances the natural biochemical breakdown of the food waste, resulting in a cleaner effluent entering the sewer system.

"This technology is innovative, helps save water and is an environmentally safe solution to grease trap maintenance," Denchfield said. "Initially, we will be targeting the foodservice industry and restaurants throughout Colorado. We also believe there is an untapped residential market of people who have mountain homes that use septic tanks, and they could benefit from the technology as well."

The Aero-life aeration system is a proprietary application of natural aeration

that converts foodservice grease traps into mini wastewater treatment plants. By creating a healthy, oxygen-rich environment in which kitchen wastewater can be cleaned and clarified, the need for chemical treatment is eliminated. The system is cost effective to install and enables restaurants and foodservice facilities to reduce their operating costs by as much as \$5,000 per year.

Dean Keller, president of Aero-life aeration systems, which is headquartered in Albuquerque, N.M., says, "The Colorado market offers some particularly good potential because of its positive economic climate. In addition, we've seen a high level of interest from business owners who are looking for "green" energy efficient products and responsible solutions to treating waste."

Aero-life currently has systems installed in more than 60 restaurants and foodservice operations in New Mexico and is in the process of building a team of national distributors.

Enviro-Water Solutions will market, install and service the Aero-life systems throughout Colorado. They can be reached by phone at 303-745-1499 or 877-745-1499. Their email is mark@environmentalsolutions.com. You may also visit them online at www.envirowatersolutions.com.
